

**CLAIM AMENDMENT**

Please **CANCEL** claims 1-43, without prejudice or disclaimer.

Please **ADD** new claims 44-53, as follows.

1-43. (Currently Cancelled)

44. (Currently Added) A thin film panel comprising:

a plurality of first wires transmitting first signals and extending in a direction substantially parallel to each other;

a plurality of second wires transmitting second signals and extending substantially parallel to the first wires;

a first testing bar connected to the first wires; and

a second testing bar connected to the second wires and separated from the first testing bar.

45. (Currently Added) The thin film panel of claim 44, wherein the first wires and the second wires are gate lines, and the first signals and the second signals are scanning signals.

46. (Currently Added) The thin film panel of claim 44, wherein the first wires and the second wires are data lines, and the first and the second signals are image signals.

47. (Currently Added) The thin film panel of claim 44, further comprising a shorting bar located outside of and connected to the first and the second wires.

48. (Currently Added) The thin film panel of claim 44, wherein the first wires and the second wires are alternately arranged.

49. (Currently Added) The thin film panel of claim 44, wherein the first wires and the second wires have cutouts for electrical disconnection.

50. (Currently Added) A thin film panel comprising:  
a plurality of first signal lines transmitting first signals, extending in a direction substantially parallel to each other, and having first ends and second ends located opposite to each other;  
a plurality of second signal lines transmitting second signals, extending substantially parallel to the first signal lines, and having first ends located near the first ends of the first signal lines and second ends located near the second ends of the second signal lines;  
a first testing bar connected to the first signal lines near the first ends of the first signal lines; and  
a second testing bar connected to the second signal lines near the first ends of the second signal lines and substantially parallel to the first testing bar.

51. (Currently Added) The thin film panel of claim 50, wherein the first and second signal lines include a first layer, and the first and second testing bars include a second layer different from the first layer.

52. (Currently Added) The thin film panel of claim 51, further comprising:  
a plurality of first connecting members connecting the first signal lines and the first testing bar; and  
a plurality of second connecting members connecting the second signal lines and the second testing bar.

53. (Currently Added) The thin film panel of claim 52, wherein the first signal lines and the second signal lines are alternately arranged.
